> WHO WE ARE

ABOUT KAJKARMA

Kajkarma is a practical, results-driven Tech and AI agency. We are a hybrid team of developers and automation experts who believe in working smarter, not just harder.

OUR MISSION

To prove that high-quality technology doesn't need to be expensive. We believe every growing business deserves access to the same powerful tools and automation that large companies use, without the inflated price tag.

OUR VISION

Mission To deliver solid, scalable systems and automated workflows that save you time and money. We cut out the "agency fluff" so you pay only for what actually grows your business.

OUR COMMITMENTS

CORE VALUES

01

Quality First

We don't cut corners to lower costs; we optimize our process. If a website isn't fast or an automation isn't stable, we don't ship it.

02

Transparent Pricing

No hidden fees, no surprise costs, and no "management bloat." We quote for the value we deliver, and we stick to it.

03

Efficiency as a Standard

We respect your budget. By using internal AI tools to handle repetitive coding tasks, we move projects from "idea" to "launch" faster than the industry standard.

THE *INDUSTRY* PROBLEM

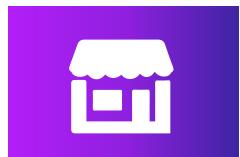

WHY ARE OTHER AGENCIES SO EXPENSIVE?

Most business owners are forced to choose between two bad options:

The "Big" Agencies

They do good work, but their fees are inflated to pay for large offices, sales teams, and slow manual processes.

The Cheap Marketplace

You find low rates, but the quality is poor, communication is messy, and the code often breaks.

“

THE REALITY:
YOU OFTEN END UP
PAYING TOO MUCH FOR
"MANAGEMENT" AND NOT
ENOUGH FOR ACTUAL
"DEVELOPMENT."

THE
Kajkarma
SOLUTIONS

admin@kajkarma.com

www.kajkarma.com

+91 90026 08683

WHY CHOOSE US

THE "SMART CHOICE" MIDDLE GROUND.

We offer the reliability and expertise of a professional agency at a price point that respects your budget. **How we offer better pricing without lowering quality:**

1

AI-Augmented Work:

We use AI to assist with code generation and testing. This saves us hours of manual work per project, which means it costs you less.

2

Lean Operations:

We don't have 5 layers of managers. You work directly with the experts building your project.

3

Integrated Systems:

We don't just build a website; we connect it to your marketing and CRM so everything works together seamlessly from day one.

> OUR SERVICES

Focused on high impact and ROI.

- Lean Operations:**

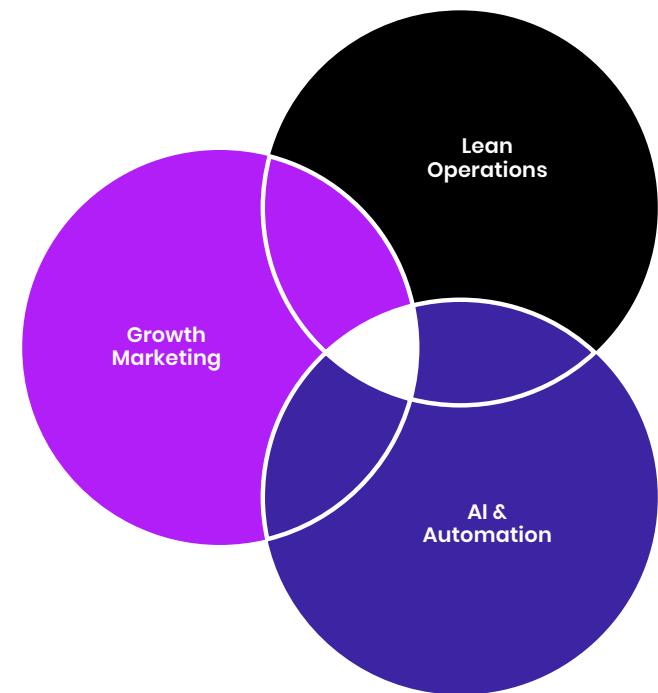

Custom websites, web applications, and digital platforms. We build fast, secure, and mobile-responsive products that look great and work perfectly.

- AI & Automation:**

We replace manual work with intelligent workflows. From chatbots that handle customer service to systems that automatically organize your data (using tools like n8n and Make).

- Growth Marketing:**

Practical marketing setups. We handle CRM implementation, lead generation pipelines, and analytics so you can see exactly where your money is going.

> HOW WE WORK

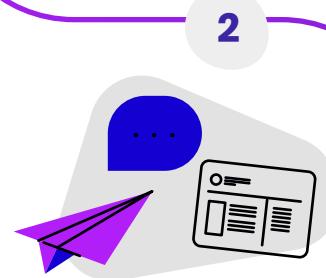

OUR TIMELINE

Structured for Speed and Clarity.

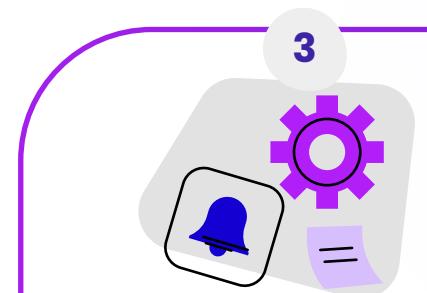

Discovery

We look at what you actually need, not just what you want to buy. We identify the best way to get it done within your budget.

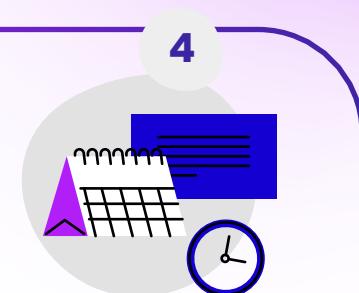

The Plan

We provide a clear roadmap and a fixed price quote. No guessing.

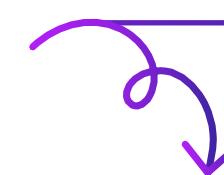

The Build

We work in focused sprints. You get regular updates so you can see the progress happening.

Launch & Support

We push your project live, ensure it runs smoothly, and provide the support you need to keep growing.

Elevate Your Business **Today.**

Project Spotlight
Case Studies

The Diamond & Gemstone Management Suite

An All-in-One System for Stock, Sales, and Global Trade

Why the Industry Needs This

The diamond and gemstone trade is unique because no two items are the same. Every stone has its own weight, color, and clarity. Tracking these manually or using basic software leads to mistakes, lost stones, and missed sales. Our goal was to build a single system that handles everything—from the moment a stone enters the office until it is sold and the staff is paid.

How We Built It (The Tech Side)

The Problems We Solved

Before this project, the client had to jump between different tools. They used one app for payroll, spreadsheets for stock, and had to check market prices on RapNet manually.

1

Pricing Mistakes: Prices change fast. If the system isn't updated, they could sell a diamond for less than it's worth.

2

Consignment Stress: Tracking stones that are sent to potential buyers on "memo" (consignment) was a mess of paperwork.

3

Wasted Time: Creating invoices and calculating employee commissions took hours of manual work every week.

How We Built It (The Tech Side)

We built this using React and TypeScript for a fast, reliable dashboard, MongoDB to store the complex details of every stone, and AWS to keep the data safe and the system running 24/7.

Live Market Sync: We linked the system directly to RapNet. This means the client can see live market prices inside their own dashboard and adjust their selling prices instantly.

Smart Barcoding: We integrated QR and Barcode scanning. Staff can simply scan a stone's label to see its entire history, certificates, and current location.

The "Public View" Feature: We created a feature that lets the client show their stock to customers online without giving away private costs or supplier info.

Automation: We automated the "boring stuff." The system now generates invoices automatically and calculates payroll and commissions based on real-time sales.

The Biggest Challenge: Managing "Memo" Items

In this industry, stones are often sent out for inspection without being paid for yet. Most software can't handle this. We built a custom "Consignment Logic" that keeps these stones on the books so they aren't lost, but marks them as "unavailable" for other sales until they are either returned or paid for.

Results

-  **Speed :**
Invoices that used to take 15 minutes now take seconds.
-  **Accuracy :**
By syncing with RapNet, the business never misses a price change.
-  **Growth :**
The "Public Stock View" allowed international buyers to browse the inventory, leading to more inquiries from around the world.
-  **Safety :**
Using AWS and MongoDB ensures that high-value business data is encrypted and backed up at all times.

The "Infinite" YouTube Lead Discovery Tool

Helping Creative Agencies Find Their Perfect Clients at Scale

Why High-End Agencies Need This: For video editing and creative agencies, finding the right clients is the hardest part of the job. For example, an agency that specializes in "Documentary-style" editing needs to find channels that actually make that specific type of content. Browsing YouTube manually is slow, and after a while, YouTube just stops showing you new or relevant results. You hit a wall where you simply can't find any more leads.

The Problem: Limited Search Results

Most agencies try to use basic search or tools like ChatGPT to find leads, but they run into three big problems:

1

The "Short List" Limit: AI tools like ChatGPT usually give you 10 or 20 famous channels and then stop or start repeating themselves.

2

Bad Matches: Searching for "Documentary" might give you a history channel when you actually need a "True Crime" storyteller. The style doesn't match.

3

Manual Overload: A human has to watch dozens of videos just to see if a channel is a good fit for their agency.

How the Software Works

We built a custom automation system using Python and a complex Large Language Model (LLM). This tool doesn't just look at channel names; it actually understands the content.

Deep Analysis: When you give the tool a "seed" channel (a channel you like), it analyzes the keywords and even reads the video transcripts. It learns exactly what kind of stories that channel tells.

Finding the "DNA" of a Channel: By reading the transcripts, the AI can tell the difference between a simple vlog and a high-end documentary.

Infinite Search Logic: This is the most important part. Once the tool finds 5 similar channels, it uses those 5 to find 50 more. Then it uses those 50 to find 500. It keeps searching deeper and deeper into YouTube to find every possible lead that fits your exact style.

The Biggest Challenge: Finding Context, Not Just Words

The hardest part was making sure the AI didn't just find "similar words" but "similar styles."

The Kajkarma Solution: We trained the system to look for specific patterns in the scripts—like how the narrator speaks or how the story is structured. This ensures that every lead the tool finds is a "perfect match" for a creative agency.

Results

This system is currently being used by successful creative agencies and has been fully battle-tested.

Never-Ending Leads:

Agencies no longer run out of people to contact. They have a constant list of fresh, highly relevant leads.

Higher Response Rates:

Because the agencies are contacting channels that perfectly match their skills, they get much better responses to their emails and messages.

Massive Time Savings:

What used to take a full-time employee days of searching now happens automatically in the background.

The "Instant Podcast" Tool

Turning Any Document or Voice Memo into Studio-Quality Video

Why Content Creators & Brands Need This

In the current digital landscape, "Video First" is the only way to stay relevant. However, creating a high-quality podcast or explainer video usually requires a scriptwriter, a voice actor, and a video editor. For busy professionals or companies with massive amounts of data (like books or reports), the time and cost to turn that information into video are simply too high.

The Problem: The Content Bottleneck

Most "AI video" tools are either too simple or too messy. They run into three major roadblocks:

1

The "Junk" Data Problem:

When you give an AI a 100-page PDF, it gets confused by page numbers, citations, and filler text, resulting in a boring or nonsensical script.

2

The "Robotic" Voice:

Most AI voices sound flat and "uncanny," which kills audience retention immediately.

3

Input Friction: Most tools only take text. If you have a voice recording or a physical book, you have to manually transcribe or type it out first.

How the Software Works - (The Triple-Input System)

We built a Python-powered engine that handles the entire production pipeline—from raw data to a finished video—using three distinct entry points:

The Text-to-Video Path:

For users with a ready-made script. It bypasses the summarization phase and goes straight to synthesis.

The "Book-to-Brief" Path (PDF/Books):

This is the heavy lifter. The system uses a fine-tuned LLM specifically trained to identify and "clean" junk data. It ignores headers, footers, and legal jargon to extract the core story, then summarizes it into a conversational podcast script.

The Voice-to-Video Path:

If you already have a recording, the tool skips voice generation entirely. It analyzes the existing audio and builds the video visuals to match the speaker's natural rhythm and tone.

The Biggest Challenge: The "Human" Element

The hardest part was ensuring the voice didn't sound like a computer.

The Kajkarma Solution: We didn't just plug in an API; we integrated a multi-model stack using OpenAI, Cartesia, and Gemini. By fine-tuning these voice models, we achieved "Human-Like" prosody—adding natural pauses, breaths, and emotional inflections. This makes the generated podcast feel like a real conversation rather than a text-to-speech reading.

Results

This system transforms a process that used to take 20+ hours into a background task that takes minutes.

Repurposing at Scale:

Companies can now turn their entire library of PDF whitepapers and internal documents into a video library overnight.

Studio Quality, Zero Hardware:

Users get high-end audio (via fine-tuned Cartesia/Gemini) and synchronized visuals without ever touching a camera or a microphone.

Accessibility:

By offering Text, PDF, and Voice inputs, the tool fits into any workflow, making it the most versatile content tool on the market.

The "Alpha Strategy" F&O Ranking Engine

Eliminating Analysis Paralysis for Indian Derivatives Traders

Why High-Frequency Traders Need This

In the Indian stock market, there are over 180+ stocks in the F&O (Futures & Options) segment. For a professional trader, monitoring every single one of these stocks manually is humanly impossible. Most traders end up "chasing" a stock after it has already moved or wasting hours looking at charts that have no setup. They don't need more data; they need filtered opportunity.

The Problem: The "Noise" of 180+ Stocks

Derivatives trading moves at lightning speed. Traders face three primary challenges:

1

Analysis Paralysis: By the time a trader finishes analyzing the 50th stock on their list, they've already missed a breakout on the 5th stock.

2

Waste of Research Time: 90% of F&O stocks on any given day aren't worth trading. Spending 10 minutes on a "dead" stock is a 10-minute loss of potential profit.

3

Fragmented Information: Having to switch between a screener, a chart, and a fundamental analysis tool breaks a trader's focus and leads to slow execution.

How the Software Works (The "Top 3" Logic)

We built a specialized stock analysis platform using React and Next.js that functions as a high-speed intelligence layer. Instead of showing a raw list of stocks, the tool applies a proprietary Ranking Logic:

Strategy-Led Sorting: The platform automatically fetches all F&O stocks and ranks them from 1 to 180 based on a pre-defined, high-probability trading strategy.

The "Daily Discovery" Feed: Every morning, the trader opens the app and sees the market already filtered. The goal is simple: Only focus on the Top 3.

In-App Deep Research: For the top-ranked stocks, the system doesn't just show a price. It provides a Detailed Analysis Module directly on the same screen—covering technical setups, volume profile, and F&O data (like Open Interest) so the trader never has to leave the page.

The Technical Implementation

To handle the volatility of the Indian market, the tech stack was chosen for maximum performance:

React & Next.js: We used Next.js for its superior speed and efficient rendering. The UI is built to update rankings in real-time without the "lag" common in traditional brokerage apps.

Complexity of Data Processing: The engine handles the heavy lifting of calculating strategy parameters across the entire F&O segment in the background, serving the user only the final "Ranked" output.

Clean UX/UI: Designed specifically to reduce "visual clutter," ensuring the trader's eyes go straight to the highest-probability setups.

The Results: Professional Grade Efficiency

The platform transforms the trader's workflow from a "searcher" to an "executive":

- **90% Reduction in Analysis Time:** Traders go from 2 hours of pre-market research to under 5 minutes.
- **Zero Missed Opportunities:** Since the tool monitors all 180+ stocks simultaneously, it catches moves that a human would have missed.
- **Data-Backed Discipline:** By forcing the trader to look at the "Top 3" ranked stocks, it prevents "revenge trading" or "impulse buying" on stocks that don't fit the strategy.

The Strategic Vision

The Strategic Vision

For B2B agencies and high-growth companies, "Omni-channel" is no longer optional. However, managing three different outreach channels (WhatsApp, LinkedIn, and Email) usually requires three different teams. We built an automated infrastructure using n8n that handles the heavy lifting of prospecting and qualification, allowing your sales team to focus only on high-intent conversations.

The Problem: "The Outreach Split"

Most companies struggle with three major inefficiencies:

1

The Manual Follow-Up Gap: 80% of sales require 5+ follow-ups, but most reps stop after one.

2

Platform Switching: Manually moving data from LinkedIn to an Email tool to a WhatsApp chat leads to data loss and "ghosted" leads.

3

Invisible Results: Without a central dashboard, it's impossible to see which channel (e.g., WhatsApp vs. Email) is actually closing the most deals.

How the Software Works (The n8n Master Flow)

We designed a "Waterfall Outreach" strategy where the automation follows the lead wherever they are most active

Stage 1: Multi-Channel Lead Sourcing: The system automatically pulls leads from LinkedIn and verified email databases.

Stage 2: The LinkedIn + Email "Drip": The tool sends a personalized LinkedIn connection request. If they don't accept in 48 hours, it automatically triggers a "Warm-up" email sequence.

Stage 3: WhatsApp Lead Qualification: Once a lead shows interest, the system moves them to WhatsApp Business API. Here, an automated bot handles the initial qualification—asking key business questions to ensure they are a "Perfect Fit."

Stage 4: The Central Dashboard: Every interaction (the LinkedIn reply, the Email open, the WhatsApp message) is fed into a custom-built dashboard. This gives the business owner a "God-view" of their entire sales pipeline in one screen.

Technical Complexity & Integrations

To make this work seamlessly, we integrated a professional-grade stack via n8n:

WhatsApp Cloud API: For official, scalable messaging that doesn't get your number banned.

LinkedIn Automation Layer: Mimics human behavior (random delays and staggered sending) to keep your account safe while scaling outreach.

Email Warm-up & API: High-deliverability email automation that ensures your messages hit the inbox, not the spam folder.

Custom Web Dashboard: Built to display real-time analytics, lead status, and response rates across all three channels.

The Results: 24/7 Virtual Sales Team

This system functions as a full-time SDR (Sales Development Rep) that never sleeps:

- **True End-to-End Automation:** Leads are identified, contacted, and qualified without a single human click.
- **Increased Reply Rates:** By hitting leads on multiple platforms (LinkedIn and WhatsApp), we've seen reply rates double compared to "Email-only" campaigns.
- **Complete Transparency:** With the centralized dashboard, clients know exactly their ROI, cost-per-lead, and the exact health of their outreach at any given moment.

Engineering Enterprise-Grade Inventory & Global API Integrations

1. The Architectural Foundation: Next.js & TypeScript

To handle high-value assets like diamonds, speed and data integrity are non-negotiable. We built these platforms using a Next.js and TypeScript stack to ensure:

Zero-Error Data Handling: Using strict TypeScript interfaces to manage complex diamond attributes (Clarity, Cut, Fluorescence, etc.), ensuring data remains consistent from the API to the checkout.

Server-Side Excellence: Leveraging Next.js for lightning-fast search indexing, allowing massive inventories to be browsed with zero lag.

2. Advanced Global Inventory Integration

The core of these projects involved deep technical integration with global diamond networks and custom supplier logic:

Rapnet Instant Inventory API: Seamless real-time synchronization with the world's largest diamond marketplace, ensuring price and availability are updated every second.

Dynamic Supplier Configurator: A custom-built engine allowing admins to add multiple suppliers via API. This includes Limited Configuration settings, giving owners the power to filter exactly which stones are displayed based on specific business rules.

Automated Markup Logic: Complex backend math that automatically adjusts pricing across thousands of stones based on real-time Rapnet data and supplier costs.

3. Proprietary "Diamond-First" Features

We engineered specific tools designed for the unique way people buy and sell gems:

Side-by-Side Comparison Tool: A high-end UI component that allows users to compare the technical "DNA" of multiple diamonds simultaneously, focusing on table percentages, crown angles, and certificate data.

The "Hold & Enquire" System: A specialized workflow where users can place a temporary lock on a stone. This triggers an immediate secure request to the supplier while notifying the admin, bridging the gap between digital browsing and physical sales.

Inquiry Management Hub: A dedicated portal for managing high-intent leads, allowing for direct communication and negotiation on specific GIA-certified stones.

4. Full-Spectrum Admin & E-Commerce Control

Beyond the storefront, we delivered a "Command Center" for the business:

Comprehensive Admin Dashboard: Total control over inventory management, user permissions, and sales tracking.

Custom E-Commerce Engine: Specialized checkout flows designed for high-ticket transactions, including secure payment processing and shipping integration.

Dynamic Supplier Management: An interface to add, edit, or remove suppliers and configure their API feeds on the fly without touching a single line of code.

5. SEO Domination & Market Authority

Every site was built with a "Search-First" mentality to ensure the technical build translated into market share:

Automated SEO Mapping: Each diamond page and category is automatically optimized for search engines, using dynamic metadata based on the stone's attributes.

Ranking Results: These technical optimizations resulted in top-tier rankings for competitive industry keywords, driving organic, high-intent traffic to the platforms from day one.

Portfolio

COMPANY INTRODUCTION

Inflowtek is a creative and young team based in udaipur, India. Our team turns ideas into visuals that captivate, brands that resonate, and designs that inspire.

We're blending strategic branding and inspired design by crafting cohesive identities, engaging visuals, and unforgettable experiences.

100+ Logo design

5000+ Creatives Delivered

50+ Branding Projects

SERVICES

LOGO DESIGN

We design unique and impactful logos that represent your brand's identity, values, and vision. Our logos are crafted to be versatile, memorable, and effective across all platforms.

BRANDING & REBRANDING

Your brand is more than a logo; it's a story. We craft compelling brand identities that resonate with your audience and set you apart.

CREATIVES & LISTING DESIGN

Brochure & Flyer Design - Posters & Banners - Social Media Creatives (Posts, Stories, Carousels, Ads) - E-commerce Listing & Product Image Design - Product Catalog, Label Design - Web Banner Creatives - Presentation & Pitch Deck Design - Infographics & Visual Content - Menu Design - Magazine, Newspaper, Outdoor Advertising Design & Print Media Design

UI/UX DESIGN

A seamless user experience is the foundation of every successful brand. We create intuitive, user-centered designs that enhance engagement.

The Art of Impactful Design : At Inflowtek, design is more than aesthetics; it's a strategic tool that transforms businesses.

Rebranding - Ar Rafi Group

Ar Rafi Old Logo

Ar Rafi New Logo

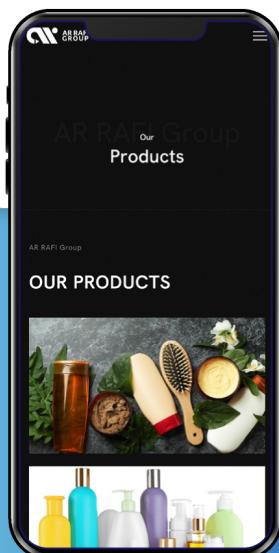

The earlier logo of AR Rafi followed an emblem style, not always adaptable across all mediums. Emblem logos are often lack flexibility in modern digital and print applications. Recognizing this, AR Rafi took a transformative step with its new identity for it's Logo. The new logo introduces contemporary wordmark and symbol combination.
